

Recommended JOBB Settings:

1. **130 EntryDateTime:** 5 sec before report.

Example: for a report breaking at 9:30 am, set it for 09:29:55.

For afternoon reports, be sure to use the military 24-hr clock (15:29:55 for a report breaking at 15:30).

2. **AtmStrategy:** The simple default setting is a 15-tick stop loss with nothing else programmed. Profit triggers are okay, but do not use trail stops, or break evens as they will interfere with profit or even cause a loss on a normally profitable setup. You also set the # of contracts you want to trade here.

3. **BracketDistance:** For the Oil inventory reports, use a setting of 10. For all other reports, choose a setting in between 7 and 10. 7 being more risky and 10 being more conservative. On smaller moving reports, a setting of 10 may barely fill and then reverse.
