Trade with caution and ensure you understand the risk. With the May contract expiry on Wednesday, strange behavior may be afoot. Occasionally prone to opposite direction spike 1-2 sec before report is released.

This is similar to the CL inventory, but it is prone to a decisive direction after the report release and about 15-25 ticks of slippage. Look for 15-40 ticks on the spike after slippage, and 40-60 ticks on the reversal.
