A rare extremely high impact report to trade that only comes 4 times a year. Due to the infrequent reporting and the gravity of the result, the influence is absorbed by the market over a long period. This report typically delivers a moderate spike 30-50 ticks on the :31 candle, then will continue into a FAN in the same direction for about 45 min. This is safe to just ride the wave. Take a look at the previous reports to evaluate the reaction. APR, '11 was indecisive with a 0.1% miss on the :31 candle, but allowed for a secondary entry. Every other report since has delivered a big yield.
