Recommended BracketDistance setting:			10*	*if using JOBB

Trade with caution and ensure you understand the risk. Occasionally prone to opposite direction spike 1-2 sec before report is released. USE of JOBB is highly risky due to the potential of the order filling in the wrong direction.

This report is similar to the CL inventory, but it is prone to a decisive direction after the report release and about 15-25 ticks of slippage. Look for 40-60 ticks net on the spike after slippage, and a reversal that often exceeds the spike. If the offset between the result and the forecast is less than 20, trading the reversal is a safe proposition. If the results are matching or nearly matching, trap trading the breakouts is a good play.
