**Trade with caution and ensure you understand the risk. Occasionally prone to opposite direction spike 1-2 sec before report is released. USE of JOBB is highly risky due to the potential of the order filling in the wrong direction.**

This report is similar to the CL inventory, but it is prone to a decisive direction after the report release and about 15-25 ticks of slippage. Look for 40-60 ticks net on the spike after slippage, and a reversal that often exceeds the spike. If the offset between the result and the forecast is less than 20, trading the reversal is a safe proposition. If the results are matching or nearly matching, trap trading the breakouts is a good play.
