Trade with caution and ensure you understand the risk. Use a 10 tick buffer for this trade to avoid a premature fill in the wrong direction.

After a safe April - June timeframe for this report with only one indecisive report, 3 reports in late June and early July were losers, then the last 7 reports were safe and delivered a big yield. Then the last 3 weeks were indecisive again before we took a break for December. The January and February reports were volatile, but relatively safe, with small yields. **As we are in the colder months, the distillate reading of the report holds more sway and presents a riskier trade for JOBB.** That is the nature of this report, though. Look for 30-50 ticks on the spike, and 40-60 ticks on the reversal. If the initial spike pops for only 15-20 ticks, get out there if possible, because a reversal is likely forthcoming. Does not routinely abide by the laws of supply and demand.

It is also a safe play to wait out the initial reaction to check the results and enter a manual trade 2-5 min after the report breaks. Paper trade this if you have not traded this report before.

**Report for JOBB that is somewhat unique. This is not found on Forex Factory. It is a monthly USDA report on agricultural commodities. It affects many different products, but Corn (ZC) is the most affected and most liquid. This has a chance to release up to about 30 sec early (2 early releases before 12:00:00 in the last 6 months), so set your bracket to launch at xx:59:25. It is safe with the bracket sitting for over 30 sec. It has the potential to seek a 2nd peak. The 1st peak often takes more than 1 candle to hit its max. Reversal usually exceeds the peak. Look for 30-100 ticks on the spike, 10-30 additional ticks on a potential 2nd peak, and 40-90 ticks on the reversal.

Note: If you have not opened a ZC chart before, you will have to set it up correctly. Open the Data series window on your chart and change the "session template" to "Default 24/7". Then hit okay. If you do not execute this step, your chart will not scroll.

10-y Bond Auction			RISK: 1	ZB 06-13
1:00 pm Eastern / 10:00 am Pacific		Forecast: n/a		
Avg 1st Peak: 12 ticks (1-3 min after report)	Min: 8 ticks (SEP '12)		Max: 25 ticks (AUG '12)	
Avg 2nd Peak: 16 ticks (55-87 min after report)	Min: 12 ticks (SEP '12)		Max: 21 ticks (OCT '12)	
Avg Reversal: 12 ticks (10-40 min after Pk)	Min: 5 ticks (DEC '12)		Max: 26 ticks (JUL '12)	
Last 6 Reports:	2 : SPK/REV	4 : 2ND PK	0 : DULL	0 : INDECISIVE
Recommended BracketDistance setting:			3	5 Tick Stop

Set your activation time for xx:01:20 as the spike will happen 1 min late. Use a 5 tick stop loss. Expect to be filled with 0-2 ticks of slippage, then look for 6-12 ticks on the spike and a point of support or resistance in that area. Though this is the 10-y Auction, it has caused a reaction on the ZB for the last 7 months consistently, and little reaction on the ZN. It may go for a 2nd peak about 1 hr after the report for 4-10 ticks more than the spike. The reversal usually matches the original spike and takes 10-40 min to pan out.

HIGH IMPACT REPORT ALERT:

Wednesday, 4/10/13

One of the bigger periodic AUS reports. Lately, nearly every report has been a 2nd Peak reaction, but on every occasion except for once, the 2nd peak has only garnered another 4-15 ticks. Very consistent spike of 25-50 ticks on the 1st bar. This report used to be a solid spike/reverse mold, but 8 of the last 11 reports have yielded 2nd peaks of 35-60 ticks. Since that is the case, be careful trading the reversal. It is better to wait for a trade against the grain and miss it, then go in too early and find yourself eating a loss. The 25-30 min area after the report is a good area to evaluate an entry for the reversal. Look for 20-40 ticks on the reversal.
