Recommended BracketDistance setting:			10	20 Tick Stop

We continue to use gold for this report. Last week was indecisive due to a matching report, but it is still a better endeavor. Much larger reaction, though less stable and probably more slippage, so tread carefully as this is still experimental, but appears to perform much better than the CL as of late. The larger stop is meant to handle potentially higher slippage, and initial retracement. Through late FEB and early MAR, the claims have been between 330 and 345K. The last 3 weeks have seen a downturn to 357K, 385K, and 346K. With the forecast of 349K on the lower side of that range, if the reading comes in better than 340-335K, or worse than 370K look for a big pop of 50 or more ticks. Otherwise, a quick 25-40 ticks with a pullback a few seconds later will likely be seen on a reading within 20K of the forecast - in that case move the stop loss to near breakeven and exit quickly.

Trade with caution and ensure you understand the risk. **THIS IS THE RISKIEST REPORT FOR JOBB.** Occasionally prone to opposite direction spike 1-2 sec before report is released. USE of JOBB is highly risky due to the potential of the order filling in the wrong direction. This is a good report to test the Stop Limit feature of JOBB at 10-15 ticks.

For those who want to try trading the report with v.4 stop limit orders, you may want to try these settings. Remember you can still absorb a lot of slippage and make several ticks when the average yield is 65 ticks.

This report is similar to the CL inventory, but it is prone to a decisive direction after the report release and about 15-25 ticks of slippage. Look for 20-40 ticks net on the spike after slippage, and a reversal that often exceeds the spike. If the offset between the result and the forecast is less than 20, trading the reversal is a safe proposition. If the results are matching or nearly matching, trap trading the breakouts is a good play.
