<b>Last 6 Reports:</b>	<b>2 : SPK/REV</b>	<b>1 : 2ND PK</b>	<b>2 : FAN</b>	<b>1 : INDECISIVE</b>
<b>Recommended BracketDistance setting:</b>		<b>3</b>	<b>5 Tick Stop</b>	

We are shifting to the ZB as a potential better performer than the CL for this report. A rare extremely high impact report to trade that only comes 4 times a year. Due to the infrequent reporting and the gravity of the result, the influence is absorbed by the market over a long period. This report typically delivers a moderate spike 8-15 ticks on the :31 bar, then after a small correction will continue into a 2nd peak or FAN in the same direction for up to 2 hrs or more. OCT, '11 was indecisive with a 0.1% difference from the forecast on the :31 candle, but the other 6 reports archived have been safe over the last 2 yrs.

Keep an eye on the DX index along with the other indicators if you are staying in the trade for the long term. Remember the DX typically trends in the same way as treasuries.
