Good medium impact report to trade. It has achieved a 2nd peak in 3 cases out of the last year, including MAR '13. MAR'12 and NOV '12 were dull with a result matching the forecast. Look for 15-30 ticks on the initial spike and at least 35 on the reversal as it usually delivers more than the spike. A potential 2nd peak should deliver 10-25 more ticks than the initial peak.

A newer report for JOBB. RISK 2 due to limited data sample of only 8 reports, but no dull or indecisive reactions yet. Due to 3 of 8 occurrences in the past where a source has released data up to 1 min early, set your bracket time for xx:58:57. This is a monthly early indicator of China manufacturing activity. Trade on the 6A

since there is no index for CNY and the AUS economy is heavily correlated. This report always is reported on the last day of the month even if on a weekend, so several months do not offer an opportunity to trade. Two reports over 6 months ago released 20 and 55 sec early. This report has delivered a consistent 8-16 ticks on the spike for all except for 1 occasion when it yielded 33 ticks. All of the last 5 reports have achieved a 2nd peak of 5-17 ticks more than the 1st peak. Look for 10-30 ticks on the reversal born out over at least 50 min.
