Trade with caution and ensure you understand the risk. Use a 10 tick buffer for this trade to avoid a premature fill in the wrong direction. RISK lowered to "3" due to the season shift.

Now that we are moving into the Spring months and into May, we should see a transition where the Distillate reading drops in significance making the report more stable and safe. The January through April reports were volatile, but relatively safe, with small yields and only 2 indecisive reports, but then the last 2 weeks were also indecisive with an initial move in the wrong direction. Look for 30-50 ticks on the spike, and 40-60 ticks on the reversal. If the initial spike pops for only 15-20 ticks, get out there if possible, because a reversal is likely forthcoming. Does not routinely abide by the laws of supply and demand.

It is also a safe play to wait out the initial reaction to check the results and enter a manual trade 2-5 min after the report breaks. Paper trade this if you have not traded this report before.

10-y Bond Auction			RISK: 1	ZB 06-13
1:00 pm Eastern / 10:00 am Pacific		Forecast: n/a		
Avg 1st Peak: 12 ticks (1-3 min after report)	Min: 8 ticks (SEP '12)		Max: 25 ticks (AUG '12)	
Avg 2nd Peak: 16 ticks (55-87 min after report)	Min: 12 ticks (SEP '12)		Max: 21 ticks (OCT '12)	
Avg Reversal: 12 ticks (10-40 min after Pk)	Min: 5 ticks (DEC '12)		Max: 26 ticks (JUL '12)	
Last 6 Reports:	2 : SPK/REV	3 : 2ND PK	1 : DULL	0 : INDECISIVE
Last 12 Reports:	3 : SPK/REV	7 : 2ND PK	2 : DULL	0 : INDECISIVE
Recommended BracketDistance setting:			3	3 Tick Stop

Set your activation time for xx:01:20 as the spike will happen 1 min late. Use a 3 tick stop loss. Expect to be filled with 0-2 ticks of slippage, then look for 6-12 ticks on the spike and a point of support or resistance in that area. Though this is the 10-y Auction, it has caused a reaction on the ZB for the last 7 months consistently, and little reaction on the ZN. If you see it hover around your fill point for more than 2 min, exit near breakeven as it is likely a dull reaction. It may go for a 2nd peak about 1 hr after the report for 4-10 ticks more than the spike. The reversal usually matches the original spike and takes 10-40 min to pan out.

One of the bigger periodic AUS reports. Last month presented an odd and devastating indecisive scenario that should be an anomaly. Check the archive screen shot and caption to see what happened if you are unfamiliar. Lately, nearly every report has been a 2nd Peak reaction, but on every occasion except for once, the 2nd peak has only garnered another 4-15 ticks. Very consistent spike of 25-50 ticks on the 1st bar. This report used to be a solid spike/reverse mold, but 8 of the last 12 reports have yielded 2nd peaks of 35-60 ticks. Since that is the case, be careful trading the reversal. It is better to wait for a trade against the grain and miss it, then go in too early and find yourself eating a loss. The 25-30 min area after the report is a good area to evaluate an entry for the reversal. Look for 20-40 ticks on the reversal.
