Reliable report to trade on the 6C. Look for 20-50 ticks on the spike, a very likely 2nd peak for a handful more ticks by the :50 bar (20 min), then a small reversal of 10-30 ticks. I would not trade the reversal as it is usually low yielding and can take a very long time to develop.

discussion of sequestration, and housing markets. This will either be a dull reaction (1 of the last 6 cases) or give you about 15-30 ticks depending upon what he says and the way investors perceive it (5 of the last 6 cases). The latter is more likely given the intensity of the topic. It is also prone to a delayed reaction with no statistical data present as the initial part of the speech is digested with the 1st peak taking up to 6 min to develop. Take that into consideration if a dull reaction appears to be panning out and you are debating canceling the JOBB order.

**Report for JOBB that is somewhat unique. This is not found on Forex Factory. It is a monthly USDA report on agricultural commodities. It affects many different products, but Corn (ZC) is the most affected and most liquid. This has a chance to release up to about 30 sec early (2 early releases before 12:00:00 in the last 6 months), so set your bracket to launch at xx:59:25. It is safe with the bracket sitting for over 30 sec. It has the potential to seek a 2nd peak. The 1st peak often takes more than 1 candle to hit its max. Reversal usually exceeds the peak. Look for 30-100 ticks on the spike, 10-30 additional ticks on a potential 2nd peak, and 40-90 ticks on the reversal.

Note: If you have not opened a ZC chart before, you will have to set it up correctly. Open the Data series window on your chart and change the "session template" to "Default 24/7". Then hit okay. If you do not execute this step, your chart will not display historical data and SMA /Pivot data accurately.
