Recommended BracketDistance setting:			10	20 Tick Stop

Trade with caution and ensure you understand the risk. THIS IS THE RISKIEST REPORT FOR JOBB. Occasionally prone to opposite direction spike 1-2 sec before report is released. USE of JOBB is highly risky due to the potential of the order filling in the wrong direction.

We are recommending a new approach to this report after a successful trial period in the last 2 months. This report offers large profit potential, but often has a premature spike and high slippage. **Set your bracket entry time 1 min early (xx:28:57).** If you get a premature spike and have less than 15 ticks on the board, move the stop loss up to breakeven or a little in the green. If it is more, then look to exit and take the profit. If you do not get a filled on the :30 bar, leave the order to wait to fill on the :31 bar for the normal move.

This report is similar to the CL inventory, but it is prone to a decisive direction after the report release and about 15-25 ticks of slippage. Look for 20-40 ticks net on the spike after slippage, and a reversal that often exceeds the spike. If the offset between the result and the forecast is less than 10, trading the reversal is a safe proposition. If the results are matching or nearly matching, trap trading the breakouts is a good play.

Crude Oil Inventory			RISK: 3	CL 07-13

Recommended BracketDistance setting:			10	15 Tick Stop

Trade with caution and ensure you understand the risk. Use a 10 tick buffer for this trade to avoid a premature fill in the wrong direction. RISK lowered to "3" due to the season shift.

Now that we are moving into the Spring months and into May, we should see a transition where the Distillate reading drops in significance making the report more stable and safe. The January through April reports were volatile, but relatively safe, with small yields and only 2 indecisive reports, but then the last 2 weeks were also indecisive with an initial move in the wrong direction. Look for 30-50 ticks on the spike, and 40-60 ticks on the reversal. If the initial spike pops for only 15-20 ticks, get out there if possible, because a reversal is likely forthcoming. Does not routinely abide by the laws of supply and demand.

It is also a safe play to wait out the initial reaction to check the results and enter a manual trade 2-5 min after the report breaks. Paper trade this if you have not traded this report before.
