Trap Trade			
Recommended Offset:		20-25 Ticks	15 Tick Stop

****DO NOT USE JOBB for this report. Lately the trend has been for all central bank news to be volatile and indecisive. We have seen premature spikes, double wickers, and unsustainable moves with the RBA, ECB, and BOC.****

I recommend using a Trap Trade approach to trade the breakouts with a pivot or SMA that is about 20-25 ticks from the origin using an ATM strategy with a 15 tick stop loss. Please see the video below if you are not familiar with this method:

One of the major AUS monthly reports that is also riskier. Since April last year, the RBA has executed 6 rate cuts for a total of 175 BP. This includes the surprise cut in May down to 2.75% and the expected cut to 2.50% last month. The RBA is common to act in an unexpected manner, so the moves are rarely priced in. With a forecast rate cut, there will be more volatility and swings are expected.

ISM Manufacturing PMI		RISK: 2	ZB 09-13

Be sure to select "Strategy Internal" mode in the JOBB settings to ensure your stop loss is not rejected on the ZB. It is also recommended to use limit orders with a slippage setting of 16 or less to bypass the CME restrictions.

Good medium impact report to trade. We continue to trade this on the ZB after a healthy yield in the last 3 months of 18 ticks(7, 13, 6 ticks in the previous 3 months). There is no other reliable statistical data on the ZB, since the period of

influence has been brief. Now with the discussion of tapering of QE3, the ZB should be highly sensitive to all US economic news. Look for 10+ ticks on the initial spike and about 10 on the reversal as it usually delivers about the same as the spike. A potential 2nd peak should deliver 5-15 more ticks than the initial peak. A weak reading will cause the ZB to rally and strong reading will cause the ZB to fall.

A rare and impacting report to trade that only comes 4 times a year. Due to the infrequent reporting, small offsets between the result and the forecast will yield several ticks; however the last 2 reports were indecisive due to a matching report, and December was dull after a narrow 0.1% offset. This report typically delivers a healthy spike of 25-50 ticks and has the potential to take more than 1 bar to reach the pinnacle. 4 of the last 9 reports have gone for a 2nd peak for another 10-20 ticks. Not the best report to trade the reversal as the yield is only about 15-20 ticks in 16 - 26 min after the last peak.
