

## HIGH IMPACT REPORT ALERT:

Friday, 9/6/13

Unemployment rate / Non-Farm Employment Change		<b>RISK: 1</b>	<b>ZB 12-13</b>	
<b>8:30 am Eastern / 5:30 am Pacific</b>		<b>Forecast: +178K jobs / 7.4%</b>		
<b>Avg 1st Peak: 32 ticks (1-3 min after report)</b>	<b>Min: 9 ticks (MAR '12)</b>	<b>Max: 69 ticks (FEB '12)</b>		
<b>Avg 2nd Peak: 48 ticks (4-65 min after report)</b>	<b>Min: 21 ticks (NOV '11)</b>	<b>Max: 78 ticks (SEP '12)</b>		
<b>Avg Reversal: 27 ticks (110-145 min after rpt)</b>	<b>Min: 8 ticks (JUL '12)</b>	<b>Max: 56 ticks (SEP '11)</b>		
<b>Last 6 Reports:</b>	<b>2 : SPK/REV</b>	<b>4 : 2ND PK</b>	<b>0 : DULL</b>	<b>0 : INDECISIVE</b>
<b>Last 12 Reports:</b>	<b>2 : SPK/REV</b>	<b>10 : 2ND PK</b>	<b>0 : DULL</b>	<b>0 : INDECISIVE</b>
<b>Recommended BracketDistance setting:</b>			<b>3-4</b>	<b>5 Tick stop</b>

<b>Parameters</b>	
BracketDistance	3
Entry CancelledIfGapped	False
Entry Slippage Ticks	16
Entry StopLimit Orders	True
Entry Time	09:59:57
Mode	StrategyInternal

\*\*\*We now only recommend trading the ZB for the NFP report as it has outperformed all other indexes. The ZB has proven to be the best performer, giving a safe entry with minimal slippage, low

margin, high value per tick, more stability, and remains at the peak of the spike longer making it easier to capture and achieve more profit. Keep in mind 1 tick on the ZB is \$31.25 (time will differ in example settings).

**Be sure to select "Strategy Internal" in the JOBB settings to ensure your stop loss is not rejected. I recommend using a breakeven setting of 15. The parameters above will prevent the exchange manipulation of your orders (time will vary)**

Most of the reports in the last several months have been mixed bags for the economy, but March was unexpectedly strong. We saw a moderate 70-165K increase (barely keeping up with population growth) with variable changes in the rate until March came in at 236K. Then May was mildly positive, June was a mixed bag, July was fairly positive, and August was mildly negative. Still, any drop in the rate has been primarily due to less people in the labor force or gains in part time labor, not sizable gains in normal hiring, so the jobs #s carry much more

## **HIGH IMPACT REPORT ALERT:**

**Friday, 9/6/13**

weight as the rate is discounted. This makes traders suspect of any positive news. The ADP report on Thursday matched the forecast with 176K jobs created causing an indecisive reaction, but this has no bearing on the NFP result. There is little correlation between the BOLS report and the ADP report since the calculation metrics differ entirely. Remember the # of jobs created carries more weight here than the U-3 % of unemployed, but if the rate change is divergent to the job #s, it can cause initial lack of conviction.

**This continues to be our safest and most profitable trade for the program offering an average of about 20 ticks net to be captured with ease on the initial spike. There were 4 indecisive reports between SEP '11 and MAY '12 due to inconsistent results where the BOLS was cooking the results in the election season. Now the markets are wiser and the same precursors would not cause indecision as the last 13 reports have been safe. Any improvement in the rate with lackluster job #s is viewed negatively as a drop in the labor force.**
