Recommended BracketDistance setting:			10	15 Tick Stop

Trade with caution and ensure you understand the risk. Use a 10 tick buffer for this trade to avoid a premature fill in the wrong direction. RISK lowered to "3" as of May due to the season shift. This report is 3-pronged (Crude oil, Gasoline, and Distillates - Heating Oil)

Now as we are transitioning from the summer months into fall, we will begin to see a transition where the Distillate reading gains in significance making the report less stable and safe. This should not happen until the weather really changes after Halloween. The January through April reports were volatile, but relatively safe, with small yields and only 2 indecisive reports, but then the last 2 weeks in April were also indecisive with an initial move in the wrong direction. Only 4 reports of the last 20 were indecisive since April. Look for 20-50 ticks on the spike, and 40-60 ticks on the reversal. If the initial spike pops for only 15-20 ticks, get out there if possible, because a reversal is likely forthcoming. Does not routinely abide by the laws of supply and demand.

It is also a safe play to wait out the initial reaction to check the results and enter a manual trade 2-5 min after the report breaks. Paper trade this if you have not traded this report before.
