New report with limited data sample due to the quarterly frequency. **This report releases 40 sec early every time, so set your activation time to xx:59:17. The peak is normally on the :01 to :03 bar (2-4 min after release).** This is the Quarterly GDP for China. Trade on the 6A since there is no index for CNY and the AUS economy is heavily correlated. Look for 15-40 ticks on the spike, and 15-25 on the reversal. There is a potential for a 2nd peak, but only 3 occurrences in the last 2 yrs. The reaction is also prone to quick and sharp reversals, so be careful if you see a long tail/wick on the initial spike. The HG (HG 03-14) also reacts to the news, but it a bit delayed. You could setup JOBB on that with the same settings, or manually trade it after you capture the 6A spike.
