Last 12 Reports:	6: SPK/REV		5 : 2N	5:2ND PK		DULL	1: INDECISIVE
Recommended BracketDistance setting:					5 1		15 Tick Stop

**Report for JOBB that is somewhat unique. This is not found on Forex Factory. It is a monthly USDA report on agricultural commodities. May was indecisive after 3 sec and 42 ticks of profit, so I recommend using a breakeven of 15-20 ticks to keep you safe. Lately the trend has seen higher slippage on the initial move, and it tends to surrender about 2/3 or more of the spike on the back end of the :01 bar or within a few min, then it rebounds to seek a 2nd peak. Due to this trend, it is a very safe report to trade the reversal after hovering midway into the :01 bar, and/or trade the 2nd peak. It affects many different products, but Corn (ZC) is the most affected, safest, and most liquid. The 1st peak is usually quickly felt on the :01 bar. Reversal often exceeds the peak. Look for 30-100 ticks on the spike, 10-30 additional ticks on a potential 2nd peak, and 40-90 ticks on the reversal.

Note: If you have not opened a ZC chart before, you will have to set it up correctly. Open the Data series window on your chart and change the "session template" to "Default 24/7". Then hit okay. If you do not execute this step, your chart will not display historical data and SMA /Pivot data accurately.
