Based on the trend of higher slippage recently, I am recommending the stop limit orders with the settings to the left.

Report for JOBB that is somewhat unique. This is not found on Forex Factory. It is a monthly USDA report on agricultural commodities. May 2013 was indecisive after 3 sec and 42 ticks of profit, but all others have presented an opportunity for profit. Lately the trend has seen higher slippage on the initial move, and it tends to surrender about 2/3 or more of the spike on the back end of the :01 bar or within a few min, then it rebounds to seek a 2nd peak. Due to this trend look to exit no later than 30 sec into the bar and at the first sign of hovering. It is a very safe report to trade the reversal after hovering midway into the :01 bar, and/or trade the 2nd peak after a sizeable retreat from the initial peak. It affects many different products, but Corn (ZC) is the most affected, safest, and most liquid. Look for 30-100 ticks on the spike, 10-30 additional ticks on a potential 2nd peak, and 40-90 ticks on the reversal.

Note: If you have not opened a ZC chart before, you will have to set it up correctly. Open the Data series window on your chart and change the "session
