

HIGH IMPACT REPORT ALERT:

Friday, 6/13/14

*****We anticipate the 09-14 contract overtaking the 06-14 contract overnight between Thurs and Fri. As long as volume on the 09-14 is about 2x or more than the 06-14 this will be accurate. Otherwise stay with the 06-14.**

Prelim UoM Consumer Sentiment - Trap Trade	RISK: 2	6J 09-14	
9:55 am Eastern / 6:55 am Pacific	Forecast: 83.2		
Recommended settings:	Tier 1: ~8 ticks	Tier 2: ~15 ticks	10 Tick Stop

Newer report for JOBB for the Trap Trade approach. Please take note of the bizarre release time. Look for the first peak to be reached by 8 sec after the release, then the reversal to materialize within 4 min. We have had 5 reports yield 8-12 ticks and 2 reports yield 16 and 23 ticks since the summer, so use a 2 tier approach with 1 trap at about 8 ticks offset and the outer tier at 15 ticks offset. Try to optimize the location of the tier to be just outside of a Pivot, SMA, or HOD/LOD/OOD. **If you see a spike that is 1-2 ticks short of your tier and hovering, it is safe to move the tier closer. Otherwise if you are not filled in the first 20 sec, cancel the order.**
