Last 8 Reports:	3 : SPK/REV	4 : 2ND PK	0 : DULL	1 : INDECISIVE
Recommended BracketDistance setting:			4	6 Tick Stop

New report on the 6A and AUS news circuit (3rd time for JOBB) that has been slowly gaining in impact. It snuck up on us as it was an ORANGE report on Forex Factory until October. With the last 6 months of data, this report is typically safe and tame. May would have been stopped out on retracement after the initial spike, so we expanded the stop to 6 ticks. It usually moves gradually for a few ticks at a time and peaks halfway through the :32 bar to early on the :33 bar (1:30 - ~2:15 after the report). It may even have the appearance of a dull reaction initially, but be patient and exit in the timeframe suggested to enhance profit captured. I recommend a breakeven setting of 6 ticks on this report. While there is no forecast, it seems fairly consistent to use the previous reading as the center of gravity. If the reading comes in higher it will likely rally and fall if lower. There is an occasional 1 pt correction to the previous report too. Look for a total gross spike of 20-24 ticks on the first peak. With 4 2nd peaks out of 6 reports, it is a good idea to take a trade entering after the reversal and staying in until the 13 crosses the 20 SMA. The reversal typically yields about 15 ticks around 30-60 min after the report.
