### Thursday, 7/24/14

This report releases ON TIME now so you will see the spike move on the :01 bar. Set your activation time for xx:59:57. This consists of a high impacting manufacturing reading along with a lesser influential services reading. May and Sep 2013 were indecisive with the services reading opposing the manufacturing, and June 2013 was also indecisive with high slippage due to the aftermath of the FED shock to the markets, but all others in the last year have been safe. Due to each indecisive report having a valid cause and the tight stop of only 5 ticks, this is still a Risk 2 report. This report normally peaks on the :01 bar. Look for 8-20 ticks net on the spike, 25-35 ticks on a very likely 2nd peak, and 10-17 ticks on the reversal in 12-23 min. This breaks at the beginning of the European trading session, so the volume on the 6E will be fairly high. The potential for a 2nd peak is fairly high with 6 occurrences in the last 12. Remember the German report breaks 30 min after the French, so ensure you are out of any trade before the bottom of the hour (:29 bar).

## Thursday, 7/24/14

This report releases ON TIME now so you will see the spike move on the :31 bar. Set your activation time for xx:29:57. If the French report is indecisive due to conflicting data, do not trade the German report as the probability of a similar result is high. This consists of a high impacting manufacturing reading along with a lesser influential services reading. May and Sep 2013 were indecisive with the services reading opposing the manufacturing, and we sat out June due to the French report reaction and the market conditions in the aftermath of the FED action at the time. Then May was indecisive after the French report was safe due to conflicting results. This report occasionally peaks after the first bar. All of the reports have yielded a 2nd peak except Feb (even those that are initially indecisive), so it is safe to look for a manual entry later after a quick reversal. Look for 7 - 15 ticks net on the spike, 26-50 ticks on a likely 2nd peak in 9-25 min, and 10-17 ticks on the reversal in 12-23 min. This breaks 30 min after the beginning of the European trading session and the French report, so the volume on the 6E will be fairly high.

#### Thursday, 7/24/14

Unemployment Claims - Trap Trade						RISK: 1	6J 09-14	
8:30 am Eastern / 5:3	80 am	Pacific Forecast:				ОК		
Avg 1st Peak: 14 ticks (0:01-0:22 sec)	5	Min: 8 ticks (11/21/13)				Max: 21 ticks (12/5/13)		
Avg Reversal: 13 ticks (0:11 - 3:30 after repo		Min: 8 ticks (11/21/13)				Max: 26 ticks (12/12/13)		
Last 12 Reports: 5 : Tie	r 1	1: Tie	er 2	6 : DULL (no	o fill)	0 : DULL (fill)	0 : STOPPED	
Recommended se		Tier	1: 8-10 ticks	Tier 2	2: 18-20 ticks	10 Tick Stop		

Look for the first peak to be reached in 1-22 sec after the release, then the reversal to materialize between 11 sec on the :31 bar up to about 4-5 min. Of the reactions that would have breached the Trap tiers, we have had several reports yield 8-12 ticks and a few other reports yield 19-21 ticks since inception, so use a 2 tier approach with 1 trap at about 8-10 ticks offset and the outer tier at 18-20 ticks offset. Try to optimize the location of the tier to be just outside of a Pivot, SMA, or HOD/LOD/OOD. If you are not filled in the first 20 sec, cancel the order. No other report will be released at the same time.

Recommended BracketDistance setting:						10	20 Tick Stop		

## Thursday, 7/24/14

Trade with caution and ensure you understand the risk. THIS IS THE RISKIEST REPORT FOR JOBB. Occasionally prone to opposite direction spike 1-2 sec before report is released and slippage up to 30+ ticks (40-50 ticks on moves that gross over 100 ticks). USE of JOBB is highly risky due to the potential of the order filling in the wrong direction.

Set your bracket entry time only 1 second early (xx:29:59) and ensure a good clock synch. A profit target of 20 ticks or less is safer, while also using a breakeven to move the stop to a more favorable position. This report is similar to the CL inventory, but it is prone to a decisive direction after the report release and about 15-30 ticks of slippage. Look for 20-40 ticks net on the spike after slippage, and a reversal that often exceeds the spike. If the offset between the result and the forecast is less than 10, trading the reversal is a safe proposition. If the results are matching or nearly matching, buying the dips and selling the tops is a good play.

Another reliable approach is to look for a reversal entry late in the :33 bar and look for 15-20 ticks. As long as there is a stable spike on the :31 bar, this is successful about 2/3 of the time with a stop of about 10 ticks.
