Trade with caution and ensure you understand the risk. Use a 10 tick buffer for this trade to avoid a premature fill in the wrong direction. This report is 3-pronged (Crude oil, Gasoline, and Distillates - Heating Oil)

Now as we are in the summer months, we have seen a transition where the Distillate reading will fall off the radar making the report more stable and safe. Quick and large reversals are common, so I recommend using a breakeven and profit target. Be sure and exit if you see the price action hovering for more than 5 sec as it will likely reverse strongly. Look for 10-20 ticks net on the spike, and 40-60 ticks on the reversal. If the initial spike pops for only a few ticks beyond your fill point and hovers, get out there if possible, because a reversal is likely forthcoming. Does not routinely abide by the laws of supply and demand.

It is also a safe play to wait out the initial reaction to check the results and enter a manual trade after a reversal about 3 min after the report breaks or use a Trap Trade with an offset of 20-25 ticks and look for a quick exit with around 5-10 ticks. Also look for trend lines on the swings to use for favorable entries. Paper trade this if you have not traded this report before.
