

HIGH IMPACT REPORT ALERT:

Thursday, 9/11/14

Unemployment Claims - Trap Trade				RISK: 1	6J 09-14
8:30 am Eastern / 5:30 am Pacific			Forecast: 306K		
Avg 1st Peak: 14 ticks (0:01-0:22 sec)		Min: 8 ticks (11/21/13)		Max: 21 ticks (12/5/13)	
Avg Reversal: 13 ticks (0:11 - 3:30 after report)		Min: 8 ticks (11/21/13)		Max: 26 ticks (12/12/13)	
Last 12 Reports:	4 : Tier 1	2: Tier 2	6 : DULL (no fill)	0 : DULL (fill)	0 : STOPPED
Recommended settings:		Tier 1: 8-10 ticks	Tier 2: 18-20 ticks	10 Tick Stop	

Look for the first peak to be reached in 1-22 sec after the release, then the reversal to materialize between 11 sec on the :31 bar up to about 4-5 min. Of the reactions that would have breached the Trap tiers, we have had several reports yield 8-12 ticks and a few other reports yield 19-21 ticks since inception, so use a 2 tier approach with 1 trap at about 8-10 ticks offset and the outer tier at 18-20 ticks offset. Try to optimize the location of the tier to be just outside of a Pivot, SMA, or HOD/LOD/OOD. **If you are not filled in the first 20 sec, cancel the order or if it falls short of a tier and hovers it is also safe to manually move the order closer for an entry.** No other news will be released with this report.

HIGH IMPACT REPORT ALERT:

Thursday, 9/11/14

Natural Gas Storage (Yellow Report)		RISK: 5	NG 10-14	
10:30 am Eastern / 7:30 am Pacific		Forecast: 84B FT³		
Avg 1st Peak: 64 ticks (1-2 min after report)	Min: 13 ticks (11/7/13)	Max: 170 ticks (5/2/13)		
Avg 2nd Peak: 108 ticks (4-20 min after rpt)	Min: 23 ticks (11/7/13)	Max: 257 ticks (6/14/12)		
Avg Reversal: 63 ticks (11-40 min after Pk)	Min: 16 ticks (3/8/12)	Max: 155 ticks (8/16/12)		
Last 10 Reports:	3 : SPK/REV	4 : 2ND PK	0 : DULL	3 : INDECISIVE
Last 25 Reports:	10 : SPK/REV	7 : 2ND PK	0 : DULL	8 : INDECISIVE
Recommended BracketDistance setting:			10	20 Tick Stop

Trade with caution and ensure you understand the risk. THIS IS THE RISKIEST REPORT FOR JOBB. Occasionally prone to opposite direction spike 1-2 sec before report is released and slippage up to 30+ ticks (40-50 ticks on moves that gross over 100 ticks). USE of JOBB is highly risky due to the potential of the order filling in the wrong direction.

Set your bracket entry time only 1 second early (xx:29:59) and ensure a good clock synch. A profit target of 20 ticks or less is safer, while also using a breakeven to move the stop to a more favorable position. This report is similar to the CL inventory, but it is prone to a decisive direction after the report release and about 15-30 ticks of slippage. Look for 20-40 ticks net on the spike after slippage, and a reversal that often exceeds the spike. If the offset between the result and the forecast is less than 10, trading the reversal is a safe proposition. If the results are matching or nearly matching, buying the dips and selling the tops is a good play.

Another reliable approach is to look for a reversal entry late in the :33 bar and look for 15-20 ticks. As long as there is a stable spike on the :31 bar, this is successful about 2/3 of the time with a stop of about 10 ticks.

HIGH IMPACT REPORT ALERT:

Thursday, 9/11/14

World Agriculture Supply and Demand Estimates (WASDE)-Corn		RISK: 2	ZC 12-14	
12:00 pm Eastern / 9:00 am Pacific		Forecast: n/a (not on Forex Factory)		
Avg 1st Peak: 50 ticks (1-3 min after report)	Min: 10 ticks (DEC '13)	Max: 120 ticks (JAN '13)		
Avg 2nd Peak: 78 ticks (4-6 min after report)	Min: 29 ticks (DEC '12)	Max: 147 ticks (JAN '13)		
Avg Reversal: 60 ticks (5-25 min after report)	Min: 16 ticks (JAN '14)	Max: 131 ticks (AUG '12)		
Last 6 Reports:	4 : SPK/REV	2 : 2ND PK	0 : DULL	0 : INDECISIVE
Last 12 Reports:	8 : SPK/REV	4 : 2ND PK	0 : DULL	0 : INDECISIVE
Recommended BracketDistance setting:		5	15 Tick Stop	

Parameters	
BracketDistance	5
Entry CancelledIfGapped	True
Entry Slippage Ticks	10
Entry StopLimit Orders	True
Entry Time	11:59:57
Mode	StrategyInternal

Based on the trend of higher slippage recently, I am recommending the stop limit orders with the settings to the left.

Report for JOBB that is somewhat unique. This is not found on Forex Factory but the release is announced on talking forex. It is a monthly USDA report on agricultural commodities. May 2013 was indecisive after 3 sec and 42 ticks of profit, but all others have presented an opportunity for profit. Lately the trend has seen higher slippage on the initial move, and it tends to surrender about 2/3 or more of the spike on the back end of the :01 bar or within a few min, then it rebounds to seek a 2nd peak. 4 of the last 6 reports have only yielded 10-14 ticks gross before reversing 20-36 ticks in the next few min. Due to this trend look to exit no later than 30 sec into the bar and at the first sign of hovering. It is a very safe report to trade the reversal after hovering midway into the :01 bar, but we have not had a 2nd peak in several months. It affects many different products, but Corn (ZC) is the most affected, safest, and most liquid. Look for 5-30 net ticks on the spike, and 20-60 ticks on the reversal.

Note: If you have not opened a ZC chart before, you will have to set it up correctly. Open the Data series window on your chart and change the "session template" to "Default 24/7". Then hit okay. If you do not execute this step, your chart will not display historical data and SMA / Pivot data accurately.

HIGH IMPACT REPORT ALERT:

Thursday, 9/11/14

World Agriculture Supply & Demand Estimates(WASDE)Soybeans	RISK: 2	ZS 11-14
12:00 pm Eastern / 9:00 am Pacific	Forecast: n/a (not on Forex Factory)	
Recommended BracketDistance setting:	6	15 Tick Stop

Report for JOBB that is somewhat unique. This is not found on Forex Factory. It is a monthly USDA report on agricultural commodities. **Set your activation time to 12:00:32 and ensure you have a very precise clock synch. If the report is delayed, cancel the order as the timing will be off.** After the traditional approach on the ZC has not been as profitable in the last 6 months with slippage and unsustainable moves, we are offering a unique alternative approach on the ZS. The initial reaction is often accompanied with a premature move, indecision or a decisive move. The commonality among all of them in the last several months is that they tend to stall about halfway through the :01 bar, then make another move in the next minute or so. Since this can go in either direction with respect to the initial move, we will use a bracket approach. We are looking for a low slippage fill, then a move either way to go for at least 25-30 ticks net in 1:32 to 2:02 after the report. When we tried this in April, it resulted in a loss, but would have worked again in May, June, and July. Last month would have resulted in a small profit. In the last year, we have had yields of 37 - 83 ticks with this approach on all but 2 occasions. It may hover around your fill point or even go a few ticks in the red initially, but the move will follow, so be patient, set a profit target, and wait for it to fill about 1 min or so later while trailing your stop.

Note: If you have not opened a ZS chart before, you will have to set it up correctly. Open the Data series window on your chart and change the "session template" to "Default 24/7". Then hit okay. If you do not execute this step, your chart will not display historical data and SMA /Pivot data accurately.

HIGH IMPACT REPORT ALERT:

Thursday, 9/11/14

30-y Bond Auction (Yellow Report)		RISK: 2	ZB 12-14	
1:01 pm Eastern / 10:01 am Pacific		Forecast: n/a		
Avg 1st Peak: 13 ticks (1-5 min after report)	Min: 3 ticks (APR '14)	Max: 53 ticks (AUG '11)		
Avg 2nd Peak: 21 ticks (11-30 min after report)	Min: 10 ticks (JUL '12)	Max: 67 ticks (AUG '11)		
Avg Reversal: 17 ticks (10-40 min after Pk)	Min: 6 ticks (JUL '12)	Max: 53 ticks (AUG '11)		
Last 6 Reports:	3 : SPK/REV	2 : 2ND PK	1 : DULL	0 : INDECISIVE
Last 12 Reports:	6 : SPK/REV	5 : 2ND PK	1 : DULL	0 : INDECISIVE
Recommended BracketDistance setting:			3	5 Tick Stop

Be sure to select "Strategy Internal" mode in the JOBB settings to ensure your stop loss is not rejected.

Set your activation time for xx:01:30 as the spike will happen around 90 sec late on the :02 bar. Use a 5 tick stop loss. April 2013 saw the first indecisive report in a year to mar an otherwise spotless record. Then June 2013 was a loser too. With all reports since July 2013 being safe, we have returned this to a risk 2 report. April was dull with only a 3 tick spike in an unusual reaction. Expect to be filled with 0-2 ticks of slippage, then look for 6-10 ticks on the spike and a point of support or resistance in that area. It may go for a 2nd peak about 11-30 min after the report for about 5 ticks more than the spike. The reversal usually falls in the range of 1-2x the original spike and takes 20-40 min to pan out after the last peak.
