

HIGH IMPACT REPORT ALERT:

Thursday, 12/11/14

Unemployment Claims / Rtl Sales - Trap Trade		RISK: 2	6J 12-14	
8:30 am Eastern / 5:30 am Pacific		Forecast: 299K		
Avg 1st Peak: 14 ticks (0:01-0:22 sec)	Min: 8 ticks (11/21/13)	Max: 21 ticks (12/5/13)		
Avg Reversal: 13 ticks (0:11 - 3:30 after report)	Min: 8 ticks (11/21/13)	Max: 26 ticks (12/12/13)		
Last 10 Reports:	7 : SPK/REV	3 : DULL (no fill)	0 : DULL (fill)	0 : STOPPED
Recommended settings:		Tier 1: 10-12 ticks	Tier 2: 18-20 ticks	10 Tick Stop

Look for the first peak to be usually reached in 1-6 sec after the release, then the reversal to materialize between 11 sec on the :31 bar up to 3 min, 30 sec later on the :34 bar. We have had 4 reports yield 8-12 ticks and 3 reports yield 19-21 ticks since inception, so use a 2 tier approach with 1 trap at about 10-12 ticks offset and the outer tier at 18-20 ticks offset. Try to optimize the location of the tier to be just outside of a Pivot, SMA, or HOD/LOD/OOD. **If you are not filled in the first 20 sec, cancel the order.**

Unemployment Claims / Rtl Sales - Trap Trade		RISK: 2	ZB 03-15	
8:30 am Eastern / 5:30 am Pacific		Forecast: 0.1% (Core) / 0.4% (Reg)		
Recommended settings:		Tier 1: 4-5 ticks	Tier 2: 7-8 ticks	5 Tick Stop

You may also elect to trade the ZB for this with the settings above. February, March, June, & July offer a composite data sample due to double booking with Unemployment claims or Empire State Manufacturing. We saw initial spikes of 5, 5, 6, and 7 ticks on the ZB. You may also elect to trade the ZN for this with the same settings. All 4 reactions reversed late in the :31 bar to about 3 min after the report. 3 of the 4 (all but July) also achieved a 2nd peak after 4-5 min of about 3 ticks more than the initial reaction. Be aware of this and be prepared to exit with 2-3 ticks profit if you see hovering before it runs away. Try to optimize the location of the tier to be just outside of a Pivot, SMA, or HOD/LOD/OOD. **If you are not filled in the first 20 sec, cancel the order.**

HIGH IMPACT REPORT ALERT:

Thursday, 12/11/14

Natural Gas Storage (Yellow Report)		RISK: 5	NG 01-15	
10:30 am Eastern / 7:30 am Pacific		Forecast: -45B FT³		
Avg 1st Peak: 64 ticks (1-2 min after report)	Min: 13 ticks (11/7/13)	Max: 170 ticks (5/2/13)		
Avg 2nd Peak: 108 ticks (4-20 min after rpt)	Min: 23 ticks (11/7/13)	Max: 257 ticks (6/14/12)		
Avg Reversal: 63 ticks (11-40 min after Pk)	Min: 16 ticks (3/8/12)	Max: 155 ticks (8/16/12)		
Last 10 Reports:	3 : SPK/REV	4 : 2ND PK	0 : DULL	3 : INDECISIVE
Last 25 Reports:	10 : SPK/REV	7 : 2ND PK	0 : DULL	8 : INDECISIVE
Recommended BracketDistance setting:		10	20 Tick Stop	

Trade with caution and ensure you understand the risk. THIS IS THE RISKIEST REPORT FOR JOBB. Occasionally prone to opposite direction spike 1-2 sec before report is released and slippage up to 30+ ticks (40-50 ticks on moves that gross over 100 ticks). USE of JOBB is highly risky due to the potential of the order filling in the wrong direction.

Set your bracket entry time only 1 second early (xx:29:59) and ensure a good clock synch. A profit target of 20 ticks or less is safer, while also using a breakeven to move the stop to a more favorable position. This report is similar to the CL inventory, but it is prone to a decisive direction after the report release and about 15-30 ticks of slippage. Look for 20-40 ticks net on the spike after slippage, and a reversal that often exceeds the spike. If the offset between the result and the forecast is less than 10, trading the reversal is a safe proposition. If the results are matching or nearly matching, buying the dips and selling the tops is a good play.

Another reliable approach is to look for a reversal entry late in the :33 bar and look for 15-20 ticks. As long as there is a stable spike on the :31 bar, this is successful about 2/3 of the time with a stop of about 10 ticks.

HIGH IMPACT REPORT ALERT:

Thursday, 12/11/14

30-y Bond Auction (Yellow Report)		RISK: 2	ZB 03-15	
1:01 pm Eastern / 10:01 am Pacific		Forecast: n/a		
Avg 1st Peak: 13 ticks (1-5 min after report)	Min: 3 ticks (APR '14)	Max: 53 ticks (AUG '11)		
Avg 2nd Peak: 21 ticks (11-30 min after report)	Min: 10 ticks (JUL '12)	Max: 67 ticks (AUG '11)		
Avg Reversal: 17 ticks (10-40 min after Pk)	Min: 6 ticks (JUL '12)	Max: 53 ticks (AUG '11)		
Last 6 Reports:	3 : SPK/REV	2 : 2ND PK	1 : DULL	0 : INDECISIVE
Last 12 Reports:	6 : SPK/REV	5 : 2ND PK	1 : DULL	0 : INDECISIVE
Recommended BracketDistance setting:		3	5 Tick Stop	

Be sure to select "Strategy Internal" mode in the JOBB settings to ensure your stop loss is not rejected due to a Ninja Trader glitch with ATM strategies.

Set your activation time for xx:01:30 as the spike will happen around 90 sec late on the :02 bar. Use a 5 tick stop loss. April 2013 saw the first indecisive report in a year to mar an otherwise spotless record. Then June 2013 was a loser too. With all reports since July 2013 being safe, we have returned this to a risk 2 report. April was dull with only a 3 tick spike in an unusual reaction. Expect to be filled with 0-2 ticks of slippage, then look for 6-10 ticks on the spike and a point of support or resistance in that area. It may go for a 2nd peak about 11-30 min after the report for about 5 ticks more than the spike. The reversal usually falls in the range of 1-2x the original spike and takes 20-40 min to pan out after the last peak.
